

# EnergyMap - Creating a Route Boundary

Last Modified on 02/24/2026 12:55 pm EST

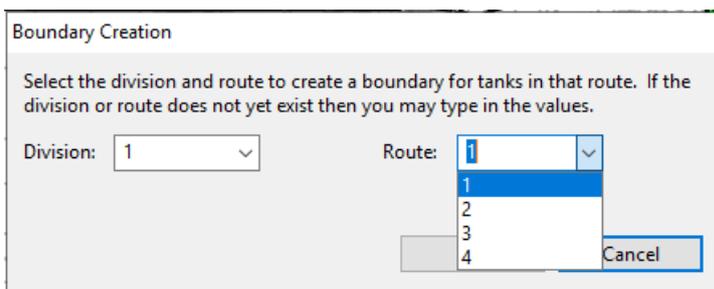

1. Select the appropriate Tank Layer located on the *Layers* tab (*Propane* or *Other Non-Propane Tanks*).

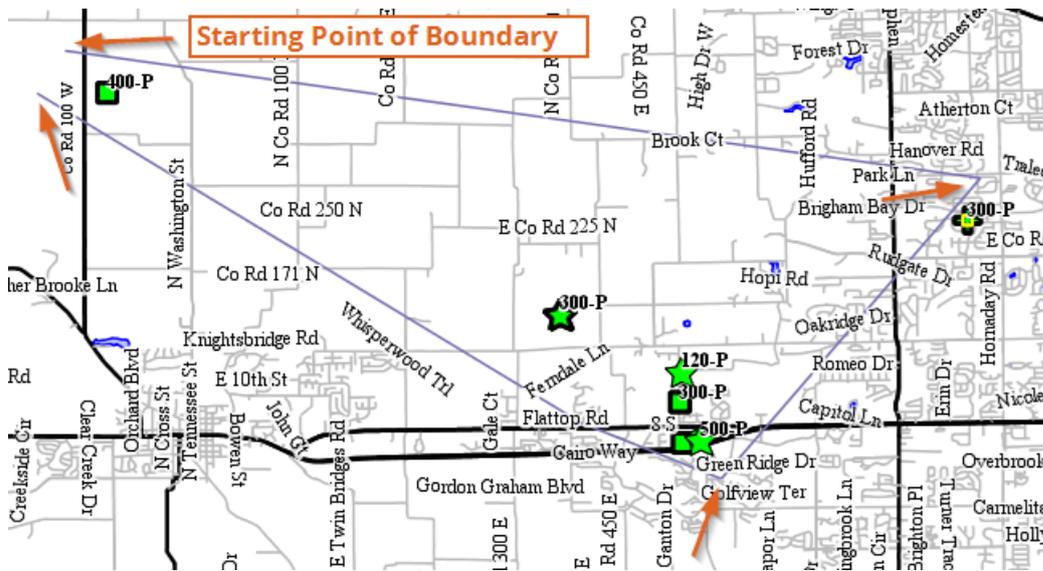

2. Select the **Boundaries** tool located on the EnergyMap Palette.
3. Choose **Draw Route Boundary**.

4. Select on the map where to begin the boundary.
5. Choose the *Division* and *Route* number and select **Ok**. If the *Route* number does not exist, it can be added by entering it in this field.

6. Draw a boundary line around the tanks.

7. Press **Shift** and double-click to finalize the boundary.
8. The boundary line will complete at the starting point.
9. Select the **Commit Route Boundary Changes** icon from the toolbar to save.
