

EnergyMap - How to Modify a Route Boundary

Last Modified on 02/24/2026 3:46 pm EST

1. Highlight the appropriate layer for editing (*Propane Boundary Lines* or *Other Boundary Lines*).

2. Zoom in to the route boundary area to be edited.
3. Select the **Editing** tool located on the Palette.
4. Select **Edit Geometry**.

5. Choose the route boundary lines. This will highlight the route for editing.

6. Using the *Vertex* symbols (this is the point made when creating the original boundary), select and drag the boundary lines to the desired area.
7. If needed, add a Vertex to the route boundary to extend the boundary area.
 - a. Choose **Add Vertex** from Palette.
 - b. Select to add Vertex to desired position on boundary line.
 - c. Choose **Edit Geometry** once more to continue editing the lines.
8. A Vertex can be removed if necessary:
 - a. Select **Remove Vertex** from the *Palette*.
 - b. Choose the Vertex to be removed.
 - c. Select **Edit Geometry** to continue editing the lines.
9. Select **Commit Route Boundary** from the toolbar to save.
