

EnergyMap - Edit Schedules

Last Modified on 08/20/2025 9:37 am EDT

Routes that have been committed to the layer and the Energy Force database do not allow for modification using EnergyMap.

Route Schedule modifications take place within Energy Force. A tank or tanks can be removed from the route or the entire route can be removed. However, the sequence of the delivery can not be modified.

Tanks can be removed from *Main Menu / Route Scheduling / Map Route Scheduling* by highlighting the tank sequence and selecting the *Delete* icon. This will remove one tank at a time and then the map will need to be reloaded to receive the modifications.
