

Post Re-Engineered ET

Last Modified on 12/05/2024 9:06 am EST

1. Navigate to *Main Menu / Posting Menu / Mobile Device Posting*.
2. Select **Mobile Device Posting**.
3. Choose **Post Re-Engineered ET**.
4. When the posting routine is selected, it automatically starts posting all of the zip files downloaded from the handheld units.

While processing, it does the following:

- Creates a Sales Posting Journal using EnergyTrack Sales Journal (ETSJ) and/or a Payment Journal using EnergyTrack Posting Journal (ETPJ) as the *User ID*.
- Assigns the next available journal number.
- Imports the *Trip Report* number from the handheld to the journal.
- Creates a backup of the zip file when it finishes posting including the date and time stamp.
Note: This relieves the issue of renaming duplicate trips to the same file name which can stop the posting routine.
- Updates Tank Information with regard to K-Factors, Degree Days, Schedules, etc.
- Updates the contract file.
- Updates EnergyMap by removing scheduled deliveries that have been completed and applies geocodes to tanks delivered to if the handheld records geographic coordinates.
- Updates the *Call In* screen by removing deliveries that have been completed.

ETSJ journals are listed along with the *Trip ID* on the Trip report from the handheld. If using the Panasonic U1 Toughbooks with Re-Engineered EnergyTrack, select **View Trip Report** located in the bottom right area of the menu and then select **Print**.

Note: If there are issues with Julian Schedule during the posting process, an exception report can be found at *Management Reports / Exception Report Menu / Julian Posting Exceptions*. It is recommended this report runs on a weekly basis to ensure that all Julian Schedules are addressed as necessary.
