Tank Type Setup

Tank Types are used to distinguish the types of tanks to track (*K* for kerosene, *CY* for Cylinder, or *P* for Propane). Enter the color codes and symbols to indicate how the tank should display on the Energy-Map.

Note: The Division and Tank Type should not be changed once it has been used.

1. On the *Tank Type Maintenance* window, select **Create**. Optionally choose a Tank Type to make any necessary changes.
2. Enter the *Division* for the Tank Type.
3. Enter *Location Number*. *0* for all is recommended.
4. In the *Type Code* field, enter a unique identifier. This can be up to two alpha/numeric characters.
5. Enter a *Description* for the Tank Type.
6. In the *Tank Associated?* field, enter *Y* if there is a tank associated with the Tank Type.
7. Choose a *Tracking Type* of either *Gallons* or *Cylinder*.
8. Choose **Save**.
