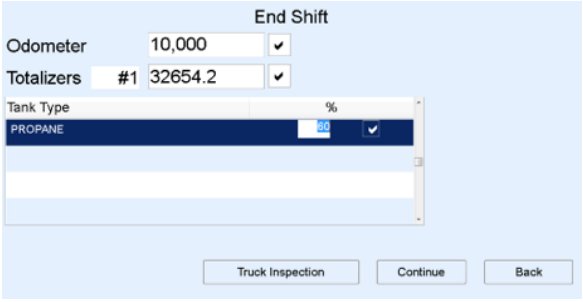
End Shift - Propane

Last Modified on 11/01/2023 8:59 am EDT

If interfaced with an electronic register such as an LCR II, EMH, Neptune, or Mid Com, place the truck computer in the docking station BEFORE selecting **End Shift**.

1. Select **End Shift**.
2. Enter the current *Odometer* reading and select the checkbox.



3. Verify (or enter if not interfaced with an electronic register) the *Totalizer* reading and select the checkbox.
4. Verify the *Truck % Full* and tap the checkbox. If a Post Trip Inspection is required by the management team, select **Truck Inspection** and follow the directions outlined here.
5. Tap **Continue** when completed. If not interfaced with an electronic register, continue to Step 6.
6. Choose the number of copies to print.
7. A purge routine will process and the main menu of EnergyTrack will display when finished. This routine removes EnergyTrack items older than 30 days.
8. It is advised to select **Communicate** once Wi-Fi is available to send trip information to Energy Force.
