

Regulators - Propane

Last Modified on 01/13/2025 11:07 am EST

To add a regulator once a tank has been selected:

1. Select **Regulator Info**.
2. Enter the *Model* number if known.
3. Tap in the *Manufacturer* and *Stage* fields. This will produce a listing of regulator manufacturers for selection.
 - If the regulator manufacturer is unknown or is not listed, select *999 Unknown*.
 - If *Unknown* is chosen, the driver will be prompted to enter a *Description* for *Manufacturer/Stage* when **Save** is selected. This comment will communicate to Energy Force and display as a Sticky Note in the Tickler program.

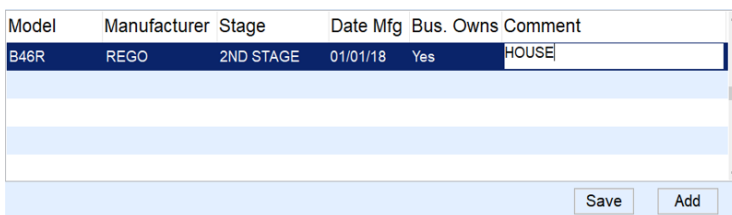

Regulator Manufacturer/Stage:

Save Back

4. Enter the Manufacturer or Stage in the *Comment* section (these can then be added to the maintenance table in Energy Force and then be adjusted in the office once received).

| Model | Manufacturer | Stage | Date Mfg | Bus. Owns | Comment |
|-------|--------------|-----------|----------|-----------|---------|
| B46R | REGO | 2ND STAGE | 01/01/18 | Yes | HOUSE |
| | | | | | |
| | | | | | |
| | | | | | |

Save Add

5. An **Add** button is present if additional regulators need to be added to the tank after an initial entry has been made.
6. If a regulator needs to be modified, select **Modify** and adjust the information as needed. Once adjusted, choose **Save**.
