★ – Key Highlight

Energy Force

- **Remote Monitors** – Remote monitors left at 0% in Target and Critical thresholds created prior the change requiring these fields to be populated are modifiable as expected.
- ★ **Optigistics** – Several OptimizerPlus changes from Optigistics have been incorporated into Energy Force. A setting in the *ini* file is no longer required for these items.
 - *Summer Fill* mode calculates Call-In gallons to deliver as expected.
 - Monitored tanks in *Summer Fill* mode will receive their first delivery based on the *Summer Fill Target* level. All subsequent fills in *Summer Fill* mode will schedule when the monitor is at the critical level set up on the monitor.
 - Tanks and Drivers in all Divisions are exporting as expected in OptimizerPlus.
 - New Export and Import routines are in place to enhance the speed of OptimizerPlus.
 - The program parses tank names from the original value to display the correct yard RRN.

EnergyService

- **Mobile Service Trips** – The length of the *mservloc.dbx* file has been increased to accommodate the longer *County Code* field so the rural flag is included.
- **Invalid Item Numbers** – EnergyService does not accept invalid item numbers. A prompt will display to enter a valid number.
