

Version 14.6.23

Last Modified on 08/05/2022 3:04 pm EDT

- When viewing historical schedules on the map, the optimizer portion displays the portion after the decimal as expected.
- The **Boundary Creation** selection box for drawing route boundaries now looks at the Routes maintenance table.
- EnergyMap displays tanks with blank values in various date columns for the tank and will call tables as expected. It will only fail out on a single tank if there is a problem reading a record.
