

Version 14.6.28

Last Modified on 08/05/2022 3:48 pm EDT

- EnergyMap only commits the tanks that have been changed, allowing it to run much faster.
- The *Load* dialog box to limit on Division/Routes/Locations is now brought up on the initial load if there are no limits saved. This will give the ability to set what limits to load without having to process the full data set first. Once limits are saved, any future loads will proceed without having to make those selections.
