# 17.236 | 07.12.2022

⭐ – Key Highlight

## Energy Force

- ⭐ **BRUT-194 / Mass Update Monitor Thresholds** – A new utility has been added at *Supervisor Menu / Processes / Utility Menu / Update Monitor Thresholds*. Monitors can be selected by *Division, Tank Location, Customer Type, Tank Route,* or *Tank Type*.

- ⭐ **BRUT-226 / Tank Export File** – Additional fields have been added to the Tank Export file on the *Daily Clear* menu to include *Master RRN, Tank Name, Route, Tank Address, Tank City*, and *Tank Default Product*. In order to take advantage of these changes when importing into Agvance, a change needs to be made to the *Tank RRN# Attribute* field in the Agvance Energy Force grid.

- ⭐ **BRUT-340 / Help Center Website** – Selecting **Application Help** from the *Help* menu will navigate to the new Help Center website. Release Notes, information on Professional Services, the Product Roadmap, the Energy Force website, Contacting Support, and information on Hosted Servers can be located there. This site is still a work-in-progress and will include a Knowledge Base section coming soon.

- ⭐ **BRUT-266 / Help Menu About** – Selecting **About** from the *Help* menu displays the current Energy Force version.

- ⭐ **BRUT-236 / Check For Update** – Selecting **Check for Update** from the *Help* menu displays the current and new version. Select **Version Documentation** to open the new Help Center for Release Notes. From this screen, the update can also be installed. This selection requires a new user right and admin rights. Training will be needed prior to using. Log file and backups will also be generated.

- **BRUT-333 / OptimizerPlus SQL Queries** – The OptimizerPlus SQL Queries have been updated so that if a line has been deleted from the OptiSched file, new OptimizerPlus schedules will still import.

- **BRUT-345 / OptimizerPlus Export** – The OptimizerPlus export was updated to include Call In Delivery Types marked for Summer Fill.
