

Energy Force

- **BRUT-130 / Ctrl+Q Function** – Pressing **Ctrl+Q** (to save and go back to Query mode) is working as expected when modifying regulatory code or leak test dates.
- **BRUT-334 / Tank Leak Test Dates** – Tank leak test dates coming from EnergyTrack are updating the customer's tank as expected.
- **BRUT-421 / OptimizerPlus Schedule Files** – OptimizerPlus schedule files are writing back to the OptiLog as expected.
Note: Do not select to load the schedule log to import schedules from prior to this version.
- **BRUT-481 / Purge Information** – The Tablet Communication Log now purges entries greater than 30 days old.
- **BRUT-514 / Master Clear** – Master Clear history line items are written to a new table. This allows the Master Clear process and posting to happen all at the same time.
Note: The first time Energy Force is accessed with the new table included, the *Past Master Clear History* lines will be moved to the new table and may take a couple of minutes to process.
- **BRUT-515 / Posting EnergyTrack Trips** – The posting of EnergyTrack and MobileService trips has been sped up. This change includes the following:
 - Refactoring the posting routine and removal of 17-second delay
 - Mobile Device posting for MobileService trips has been added to the check to see if the posting routine is already in use and cannot be run until the first instance has finished
 - The lock for stopping multiple sessions of the posting routine has been moved from the ET_Gatekeeper to the recently added Running Processes table
 - The import log is now set to write to CTLS93\DD85\Logs. This log file is only created or written to when the ETLOG = Y in the .ini. A check has been added to see if a Logs folder existed under the DD85 folder and if not, one will be created. Logs will be written to this folder moving forward in an attempt to keep them localized and easier to find.
 - The tablet communication import program will now rename a file with a bad format by adding a .InvalidFormat to the end of the file name so the automated task posting routine can continue without interruption
- **BRUT-520 / Link Multiple EF Accounts Consumer Portal** – A new table was created in preparation to add the ability to link multiple Energy Force accounts on the consumer portal. The table can be viewed from *Supervisor Menu / Setup Options / EF Portal Setup / Account Associations*.
- **BRUT-521 / Cents Down** – The *Cents Down* portion of the *Contract Gas* screen has been updated with a new look and verbiage to serve as a reminder that this area on the contract is for Cents Down contracts only. A change has also been made that will prevent the cents down from being greater than the contract price.
