Version 1.4.7.6

Last Modified on 06/29/2023 10:42 am EDT

- **BRUT-595 / Customer and Tank based on Customer and Division Number** – EnergyMap now looks at customer Division as well as customer number. This alleviates issues of displaying the correct information when there are multiple customers with the same customer number in different Divisions.
- **BRUT-597 / Layers Loading** – Map layer loading does not load all layer data at the same time to ensure layers load without issue.
- **BRUT-598 / Truck Table Scheduling** – Missing *Type* code in the truck maintenance works as expected with the scheduling dialog box.
- **BRUT-599 / Filtering Schedules** – EnergyMap no longer shows a schedule that does not match the filters used when loading.
