## Yard and Tank Maintenance

Last Modified on 03/10/2025 4:35 pm EDT

The system uses *Browse Yard* & *Remote Tanks* to setup where the storage yards are located with GPS coordinates and *Setup Mins* and *Pumping Glns/Min* to facilitate routing in Energy Force.

- 1. Navigate to Main Menu / Storage Inventory / Maintenance Files / Yard and Tank Maintenance.
- 2. Select **Create** to add a new line.
- 3. Enter 1 for Div (Division).
- 4. Name of the Yard goes in the Description field.
- 5. Enter GPS coordinates, X1 and Y1, with a negative.
- 6. Enter the Setup Mins and Pumping Glns/Min.
- 7. **Tab** to continue to the second grid.
- 8. Enter Routes that will use this yard.
- 9. Select the *Location Type Yard* for the starting/ending point for route. *Tank Location Types* are for refill sites or choose *Non-Filling* for Optimizer Plus routes only.
- 10. Select Save when finished.
