

Julian Exception Report

Last Modified on 03/12/2025 10:16 am EDT

Schedules that cannot generate the next delivery date due to posting errors will be written to the Julian Posting Exceptions log located at *Management Reports / Exception Report Menu / Julian Posting Exceptions*.

The Julian Exception Report displays the *Location*, *Customer Number* and *Name*, *Tank RRN* and *Serial Number* along with *Last Delivery* and *Error Date*. Users must select each line item by checking the *Resolved* box and press **Mark Resolved** once the error has been corrected.

Div	Location	Customer#	Name	Tank RRN	Tank Serial Number	Ty...	Route	Active From	Start	End	Method Based On L...	Auto Renew	Interval	Last Delivery	Multiple...	Error...	Error...	Res...
0	0	0		0			0	01/01/1901	0/0	0/0	False	False	0	00/00/00	False	01/01/15	00:00	<input type="checkbox"/>

View Unresolved View Resolved View All View Tank Mark Resolved

This exception report is showing Julian tanks that were not updated because of posting errors. To export to excel, copy, or filter, right mouse click the grid headers.
