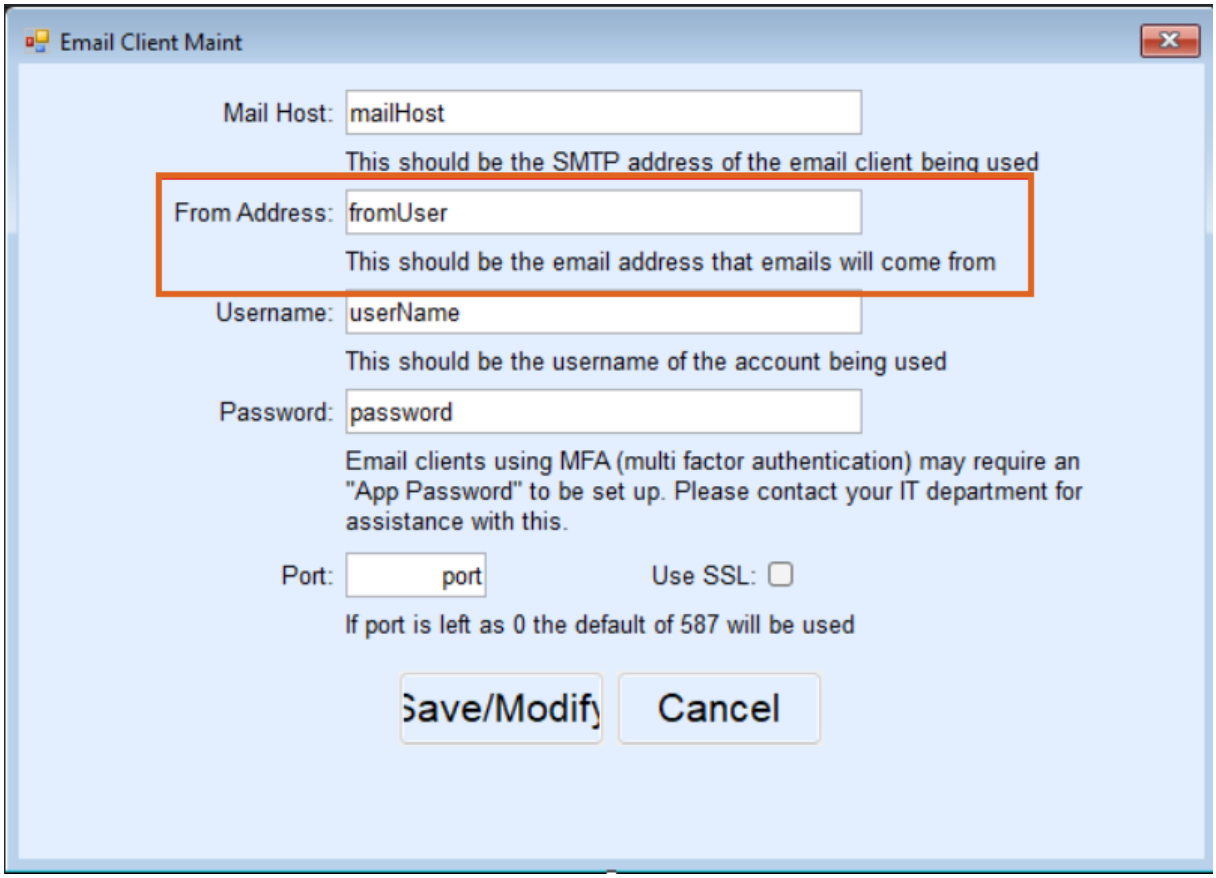
Energy Force

- **SKYR-608 / Price/Dept Override Report –** EnergyTrack Price Override report displays correctly when prices have been updated in Energy Force prior to EnergyTrack trips being posted. Price Option 1 and 2 no longer show as driver price changes. The name of the button has been changed to **EnergyTrack Price/Dept Overrides** as the report shows if the Department billed is different than the default department on the tank.
- **SKYR-990 / Price/Dept Override Exception Report –** Sales History Price and Department Override report no longer displays manually entered sales, it only displays the overrides on Energy Track. The *Excel* option has also been updated to only display the default Department when the Department invoiced is different than the default Department which matches the *Video/Printed* version of the report.
- **SKYR-882 / EnergyTrack Invoice Tank Name Character Count –** Tank Name/Serial Number display on EnergyTrack Invoices has been expanded to handle the full 30 character Tank Name along with the Serial Number.
- **SKYR-933 / Energy Service Invoice Import –** Energy Service Invoices now write the Tank RRN and the Service Location to history when the Master Clear File is set to #5. This prevents errors when importing the Master Clear File into Agvance. The Service Location must have a tank listed in the *Equipment* or *Tank* section, if no tank is listed the Tank RRN will be 0 and will error upon import to Agvance.
- **SKYR-940 / Error Logging for Market-Based Pricing –** Additional error logging has been added to the Market Based Pricing Import program. Read more on **Market-Based Pricing**.
- **SKYR-968 / Agvance Daily Clear #5 Dates –** Daily clear #5 runs as expected when records contain 00/00/00 dates.
- **SKYR-1000 / Market-Based Pricing for Multiple Deliveries –** On EnergyTrack, Market-Based Pricing applies correctly without having to click on each line of the Invoice for multiple deliveries.
- **SKYR-1001 / Agvance Daily Clear #5 PO Character Count –** Daily Clear #5 sends a maximum of 20 characters for Purchase Order numbers to align with Agvance PO number specifications.
- **SKYR-1004 / SendGrid for Emailing –** Energy Force can now send emails using SendGrid. This change provides a *From Address* so the *From Address* and *Username* can be different. The *Username* and *Password* fields would then be used to enter the SendGrid Api Key. The *From Address* will automatically be populated with the current *Username*.



EnergyTrack

- **SKYR-915 / Priced By Identifier** – EnergyTrack has an identifier on the *Invoice* screen to explain how the Invoice is being priced. Read more on Market-Based Pricing.
- **SKYR-969 / Show Route Using Bing Maps for Navigation**– EnergyTrack will use Bing Maps for Navigation due to Windows maps coming to an End of Life as of July 2025 and can no longer be used. Internet connection is required to see a Route Overview in Map view.
