Energy Force

- **SKYR-1037 / Agvance Preference Page** – Settings for Customer Sync and Tank Import Sync for Agvance have been moved from *System Settings* to *Supervisor Menu / Set Up Options / Agvance Setup Menu*. The *API Settings* are also in the new menu. Settings are copied from the *System Settings*, placed in the new location and deleted from the old location. If the database did not have a particular setting in the *System Settings*, it will be created in the *Agvance Preferences* table and set with the default value. The user role for the *API Settings* has been updated from *Allow_AgvApiSetup* to *Allow_AgvSetup*. The user role applies to the *Agvance Setup Menu* which includes both the *API Settings* and the *Agvance Preferences*.
 - **Why** – To have a place where all of the Agvance Settings and Preferences are in one place.
 - **When/Where** – Using the Customer and Tank Sync between Energy Force and Agvance.
 - **Action needed** – No action required. Settings will be transferred automatically.

EnergyTrack

- **SKYR-1153 / Autotask Lockup During Downloads** – Zip files for Energy Track are now copied from the *TLOUT* folder to the *Archive* folder and then the original file is deleted from the *TLOUT* folder instead of moving the file. This will alleviate issues if the zip file is locked and can't be deleted, an entry will be placed in the *communicationerrors.log* in the *C:CTLS92/DD85* folder stating that the file was locked and unable to be deleted.
 - **Action needed** – No action required.
